Abstract of JP 8291069 (A)

PURPOSE: To produce a plaster, containing eperisone and a basic substance in a base, capable of effectively percutaneously administering the eperisone or its salt and useful as an ameliorant for various symptoms such as spastic paralysis. **CONSTITUTION:** This plaster contains (A) eperisone or its salt and (B) a basic substance (e.g. sodium hydroxide) in a base. Furthermore, e.g. the amount of the ingredient (A) is 0.1-20wt.% and that of the ingredient (B) is 0.1-10wt.% and especially an amount ionizably equal to the ingredient (A) in the base. When the plaster is formed into a tape pharmaceutical preparation, an acrylic tacky agent, etc., such as an alkyl (meth)acrylate polymer obtained from a 4-18C aliphatic alcohol and (meth)acrylic acid are preferably used as the base.
